

**MANUAL**

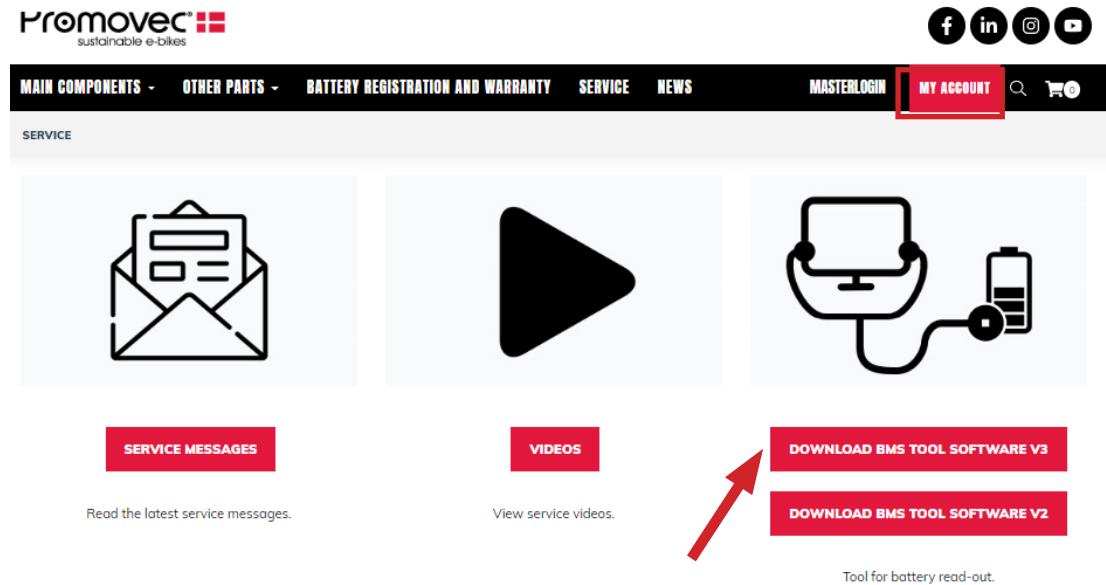

Readout of battery-data  
with “BMS Communication Tool”

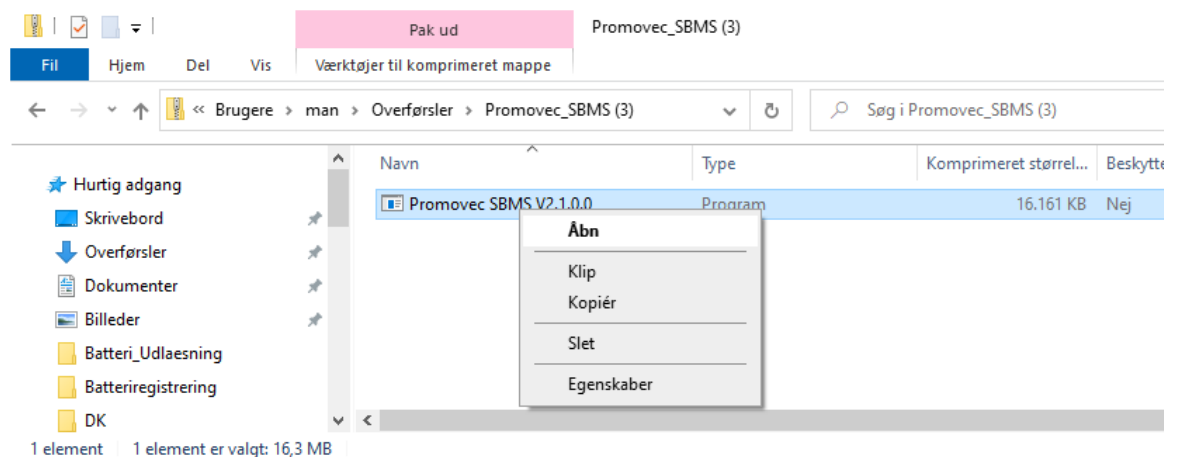

# STEP 1

Download the battery read out software from Promovec's homepage and install it on your PC. Login with your retailer login, select "SERVICE" and click on "DOWNLOAD BMS TOOL SOFTWARE".

[www.promovec.com](http://www.promovec.com)

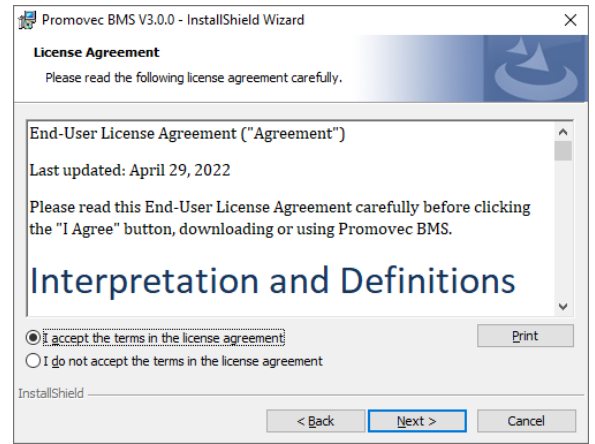

Select "Download BMS TOOL SOFTWARE" -> show in folder

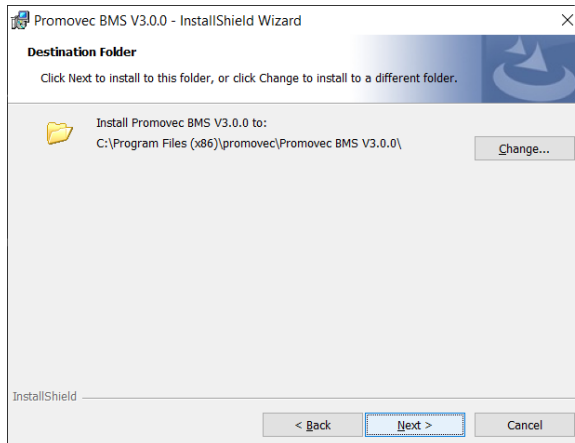

Open "Promovec.BMS.V3.0"

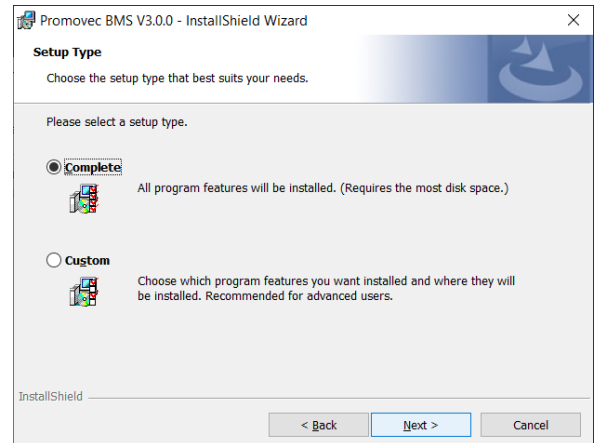

Select "Next"

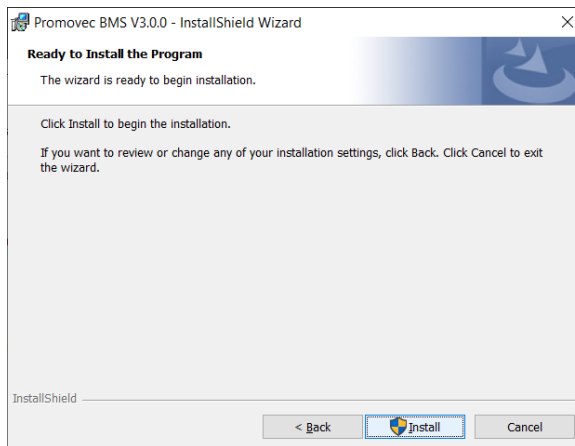

Read "License agreement"; "I accept...and Next"

Select "Next"

Select "Complete" and "Next"

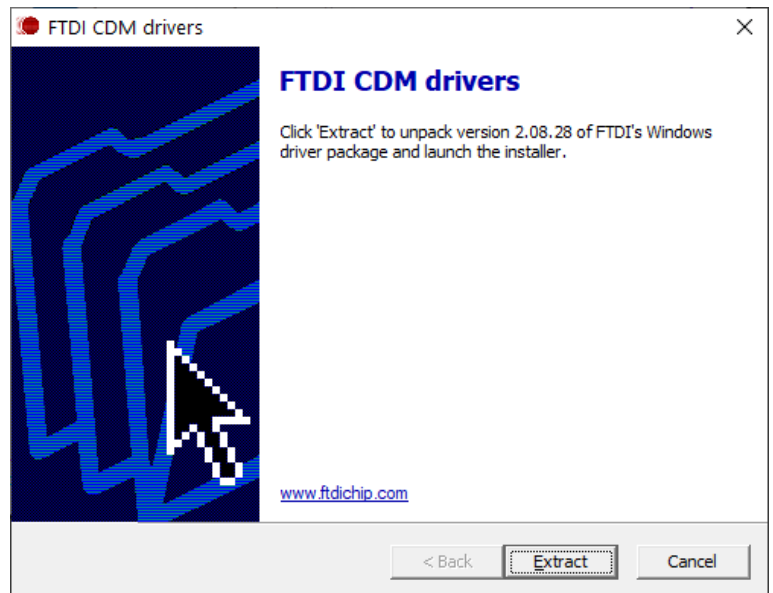

Select "Install" and the installation process starts.

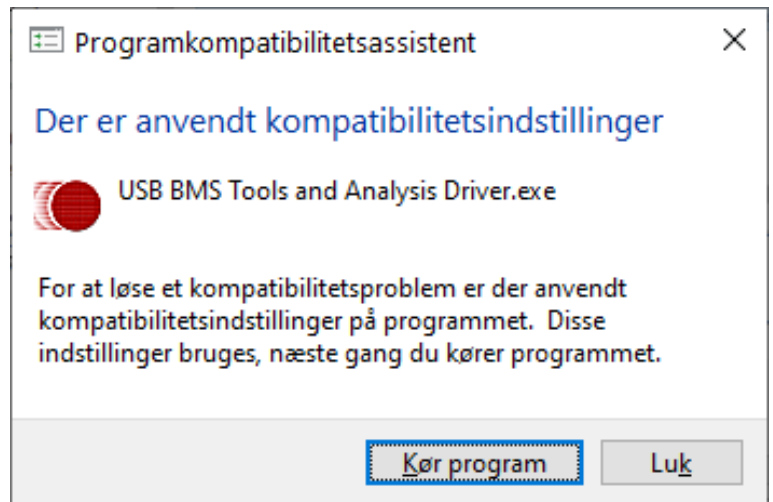

Select "Finish" to end the process

Install "USB BMS Tools Driver" included in the zip file.

Click "Extract"

"Run program"

"Complete"

# STEP 5

The battery serial number is visible after a readout top left in the "Battery Management System"

Report About

**Promovec** sustainable e-bikes Battery Management System BMS 2.0

Explanation covering the data in the program window, see page 10.

Note! When a new battery is connected the data from the previous battery read will remain until a new "SCAN" and "Read Record" is performed.

# STEP 7

Select "Save Record" to save the data displayed on-screen. Select "Print" if you want a printed report.

Note! When a another battery is connected the data must be read again "Read record".

"PRINT" example

# STEP 8

Readout of data. The battery name and serial number is displayed in the top left of the window. The fields under:

- Battery Data indicates battery properties
- Actual Data indicates the state of the battery when reading it
- Lifetime Data indicates minimum and maximum registrations

The screenshot displays the Promovec Battery Management System (BMS 2.0) interface. The top left shows the Promovec logo and 'sustainable e-bikes'. The top right indicates 'BMS 2.0'. The main content area is divided into several sections:

- Battery Data:** Battery Name: 50775-BL-C-3, Serial Number: DKC907KDA9143, Manufacturer: Promovec, Production Date: 08-09-2020, Design Cap: 15.6 Ah, Design Vol: 36.0 V, RTC: 17-05-2022 11:31.
- Actual Data:** Voltage: 39.9 V, SOC: 85% (highlighted in green), SOH: 100%, Remain Cap: 13.0 Ah, Full Charge Cap: 15.4 Ah, Cell Temp: 18.0 °C, Max: N/A.
- Lifetime Data:** Max Temp: 34.6 °C, Min Temp: -7.1 °C, Max Batvol: 42.2 V, Min Batvol: 27.7 V, Max: -15.0 A, Max Chcurrent: 9.0 A, Cycle Count: 36.
- Voltage Data:** Cell Vol#1 through Cell Vol#9, all showing N/A.
- Charge Record:** A table with columns for Start Charged Time, Voltage(V), Remaining ..., End Charged Time, Voltage(V), and Remaining ...
- Uncharged Time:** Start Uncharged Time: 18-08-2021 00:56, End Uncharged Time: 17-05-2022 11:18, Logest Uncharged Time: 272 days.
- Buttons:** Read Record, PRINT, Save Record, SCAN.
- Error/Warn:** N/A.

At the bottom, it states 'All rights reserved. @2020 Promovec Inc'.

## Charge-data decoding and troubleshooting:

Actual Data -> MAX VolDiff:

1. If the value is higher than 500 mV, recharge the battery for 24 hours
2. read the battery
3. If the value remains above 500 mV, consider changing the battery

### Charge record

- Readings where entries in the "Time" column are close to each other could indicate a BMS error.. Connect a charger to the battery and charge the battery to 100% to verify if there is a problem.
- If the information in the column "Voltage (V) under "End Charge" is less than 41,3 V after the battery has been fully charged, charge the battery with a new/other charger.

### Lifetime Data

Min. Batvol: If the battery has been read to a value below 30 V it can indicate an error in the BMS.

## Error/Warn

Messages in the "Error/Warn" window is described below as "Change the battery" or "For information only."

ERROR/WARN - CHANGE BATTERY
Cell Drop Error
Imbalance
Record Error
RTC Error
Discharging Mosfet Error
Charging Mosfet Error
MOS Temperature Sensor Error
Cell Temperature Sensor Error
ROM Error

ERROR/WARN - INFORMATION ONLY

## BATTERY DATA

**RTC:** Last time "Read"

## ACTUAL DATA

**Voltage:** Voltage read

**SOC:** State of charge

**SOH:** State of health

**Remain Cap:** Remaining capacity

**Full Charge Cap:** 100% charge capacity

**Cell temp:** Battery emperature

**MAX:**

**BMS2 batteries:** N/A

**BMS3 batteries:** Max. difference between cells.

## CHARGE RECORD

All registrations is displayed here with "Read Record"

## UNCHARGED TIME

The longest period the battery without charge.

## LIFETIME DATA

**Max TMP:** Highest temperature registered

**Min Temp:** Lowest temperature registered

**Max Batvol:** The highest voltage level registered

**Min Batvol:** The Lowest voltage level registered

**Max:** The highest amount of amp's the battery has been discharged with.

**Max Chg Current:** The highest amount of amp's the battery has been discharged with.

**Cycle Count:** Total charge cycle count.\*

## VOLTAGE DATA

Available with BMS 3 batteries.  
Provides data for each cell.

## RAPPORTER

**Read Record:** Charging records displays in "Charge Record"

**Save Record:** Save the records on a text file

**PRINT:** Print a report for the customer or documentation. Includes the last 10 charging registrations.

\* One cycle equals:

- 100% discharge + 100% charged
- (50% discharge + 50% charge) 2 times
- (20% discharge + 20% charge) 5 times

" The battery can register up to 800 charges. A full report can be saved to the PC with "Save record"

## STEP

# 9

---

### Warranty checklist

- Check that the battery has been registered and is within the warranty period
- "Full charge Capacity" is more than 70% of the capacity.
- "State of Health" must be more than 70%
- When "Longest uncharged time" is more than 30 days it may result in the warranty not covering.

### Battery complaint checklist

1. Measure the battery, "Step A" page 13
2. The battery has been charged with two different chargers to rule out problems with the charger
3. Check charging inlet and power-on/off lock

# STEP A

Measuring the battery  
(Carrier batteries)

**Picture 1:** Set the voltage meter to DC-Voltage and measure the battery. When a battery has been fully charged the battery must measure at least 41.3 V.

## ABOUT PROMOVEC

Promovec is a Danish e-bike manufacturer and developer

Promovec manufactures e-bikes for major international brands and advanced battery solutions for e-bikes

In the production of all Promovec's products we seek sustainable and high-quality solutions to best serve both the planet and our customers.

**For more information about Promovec visit [www.promovec.com](http://www.promovec.com) or drop by one of our social media platforms.**
